EDUCATION

University of California, Santa Barbara

Santa Barbara, CA

B.S. in Statistics and Data Science | GPA: 3.2

Sept. 2024 – Jun. 2026

- Relevant Courses: Principles of Data Science, Regression Analysis, Applied Stochastic Processes, Statistical Learning, Design and Analysis of Experiments.

College of the Canyons

Santa Clarita, CA

Completed IGETC certified coursework | General Chemistry I & II, Statistics, Calculus I & II

Jun. 2021 – Jun. 2024

EXPERIENCE

Warehouse Specialist

Feb. 2024 – Oct. 2024

Dorsal

Santa Clarita, CA

- Audited material preparation workflows and introduced targeted assembly improvements, reducing bottlenecks and increasing daily production output.
- Met shipment deadlines consistently by coordinating task prioritization across team members and adapting quickly to fluctuating order volumes.
- Applied manufacturing principles and strategic problem-solving under pressure to streamline warehouse operations and support team efficiency goals.

PROJECTS

SpiceRack | Python, Scikit-learn, Flask, TF-IDF, K-Means, SQLite

Oct. 2024 – Present

- Led a team of developers as project manager to design and deliver a recipe recommendation web app, coordinating task delegation and technical decisions across the full development lifecycle.
- Architected a TF-IDF vectorization pipeline with IDF² boosting and TruncatedSVD compression trained on 1.7M+ recipes, achieving a silhouette score of 0.80 across ~475 clusters to ensure high-quality recommendations.
- Engineered a top-K cluster search with cosine similarity ranking and thread-safe Unsplash API image caching, reducing recommendation latency and enabling seamless AJAX-powered interactions.
- Selected as a finalist in the UCSB Data Science Club Project Showcase out of 100+ competing student teams.

MLB Pitcher Injury Risk Prediction | R, XGBoost, K-Means, tidymodels

Jan. 2026 – Mar. 2026

- Analyzed 30 years of MLB pitching data from the Lahman Database to predict pitcher injury risk in the following season using supervised and unsupervised ML methods.
- Built and compared 4 machine learning models (logistic regression, elastic net, random forest, XGBoost), identifying total innings pitched – including postseason – as the leading risk factor.
- Applied K-means clustering to segment pitchers into 3 workload archetypes; the highest-workload group showed nearly double the injury rate (26.6%) compared to the lowest (14.1%).
- Optimized the final model to flag 80% of at-risk pitchers correctly, with the top 10% highest-risk group injured at a 53.6% rate – nearly 3x the 19% baseline average.

CLUBS

Gaucha Gaming (UCSB) | Community Engagement Staff

Jan. 2026 – Present

- Coordinated with officers to support community initiatives, online events, and engagement efforts, improving member experience and retention.
- Represented the organization professionally while contributing to a safe and inclusive community environment.

Data Science Club (UCSB) | Python, Pandas, NumPy, SQL

Oct. 2024 – Present

- Won “Best Sports Analyst Project” at Datathon 2025 and was selected as a 2-time Project Pitchfire Finalist (SpiceRack, Anti-DUI) among competing student teams.
- Developed communication and presentation skills by participating in networking events and resume workshops.

SKILLS

Languages: Python, R, SQLite, C++

Libraries and Frameworks: Pandas, NumPy, Matplotlib, Scikit-Learn, XGBoost, tidymodels

Tools: Git, GitHub, VS Code, PyCharm, Jupyter Notebook

Achievements: Datathon 2025 – Best Sports Analyst Project, 2x Project Pitchfire Finalist (SpiceRack, Anti-DUI)
